

# VPP Rating Rules

# Jim Teeters

Head, Offshore Office, US Sailing

# Brief History of VPP Handicapping in the US

- MIT/Pratt Project – **MHS** Rule
  - US initiative to create a rule that could predict actual boat speed using scientific methods – **Velocity Prediction Program**
  - First use: Newport Bermuda Race 1978
- MHS given to ORC to become **IMS** in 1987
  - International Rule
  - 17 years of growth and development
- 2004: **ORR** replaced IMS (in the US.)
  - ORA management and development
  - US Sailing Offshore Office: daily implementation
  - Sailing Yacht Research Foundation: R&D to support rule development
  - 2015 Introduction of **ORR-Ez**
- Introduction of **ORCi** and **ORC Club**
  - Growing acceptance

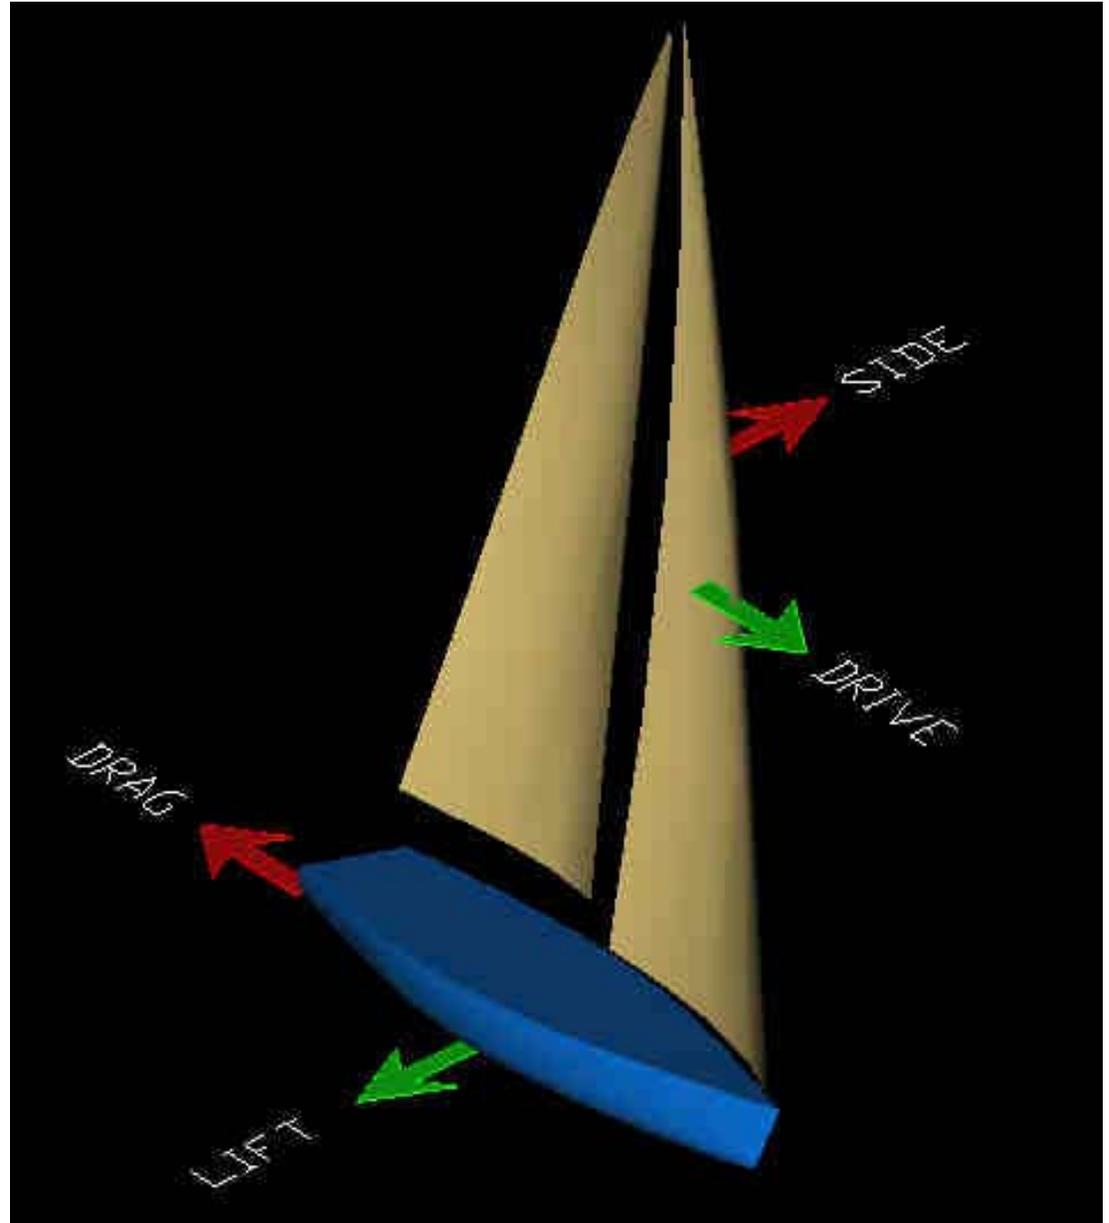

- VPP
  - Balance of Aerodynamic and Hydrodynamic Forces and Moments to find Equilibrium Speed at any Wind Angle and Wind Speed
  - Equations of High School Physics and Calculus
  - Calibrated with Extensive Tow Tank and Wind Tunnel Testing
  - Verified against Real World Sailing

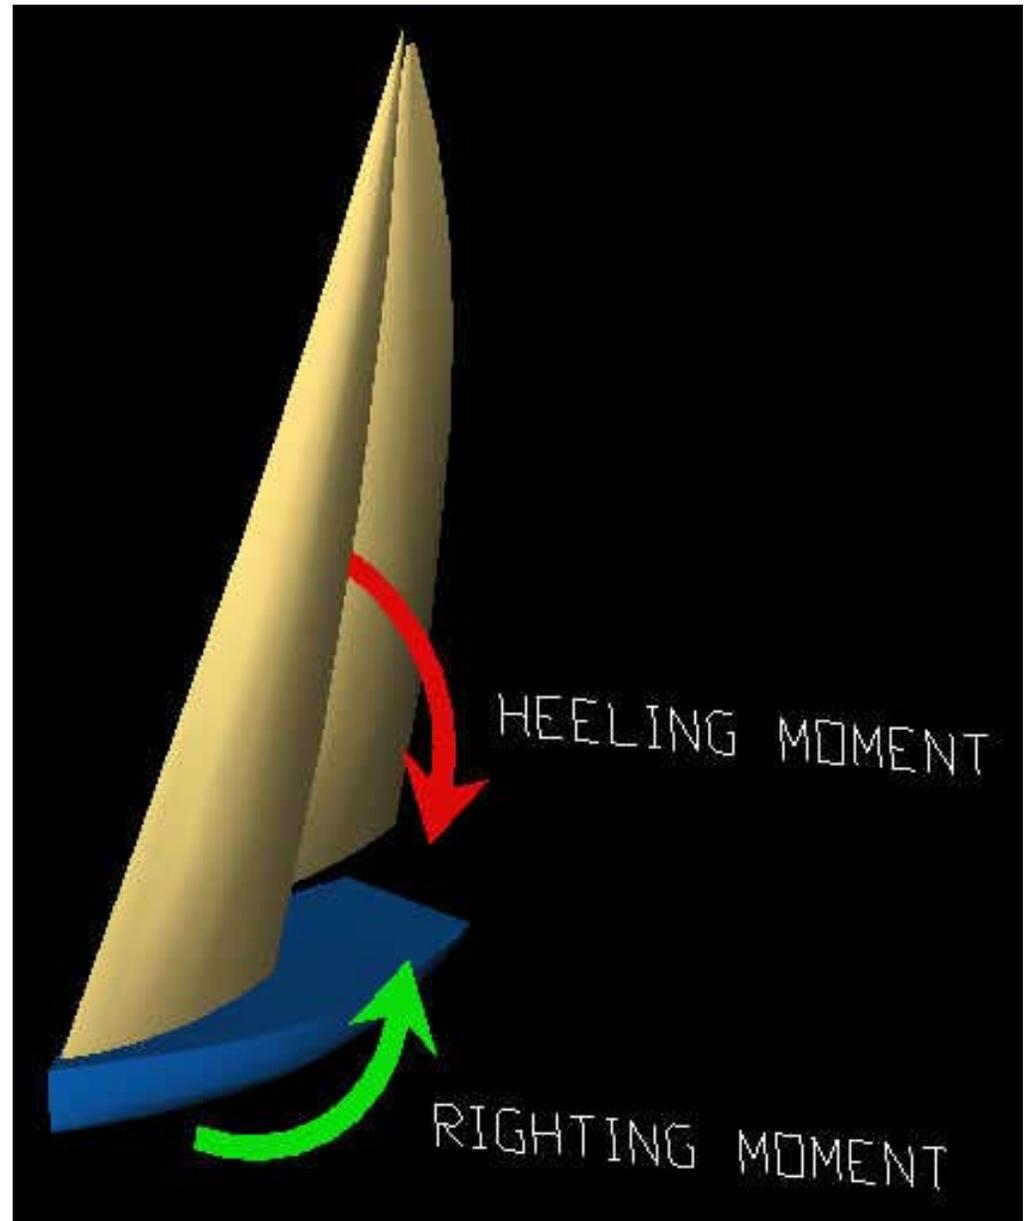

# Balance of Forces

- Drive = Drag
- Side = Lift
- Vertical Force Balance:
  - weight + vertical sail pressure = buoyancy + vertical lift

# Balance of Moments

- Heeling Moment =  
Righting Moment
- Yaw Balance
- Pitch Balance

# Data Necessary for VPP

- Hull & Appendages Hydrodynamics
  - Lift, Drag and Stability Characteristics over a Range of Conditions of Speed, Heel, etc.
  - Towing Tank and Computational Fluid Dynamics
- Rig Aerodynamics
  - Lift, Drag and Center of Effort for a Range of Heel, Wind Speed and Angle
  - De-powering Model to Represent the Requirements of Stability-Limited Sailing
  - Wind Tunnel Tests, CFD, Back Engineering
- Environmental Conditions: Wind, Waves

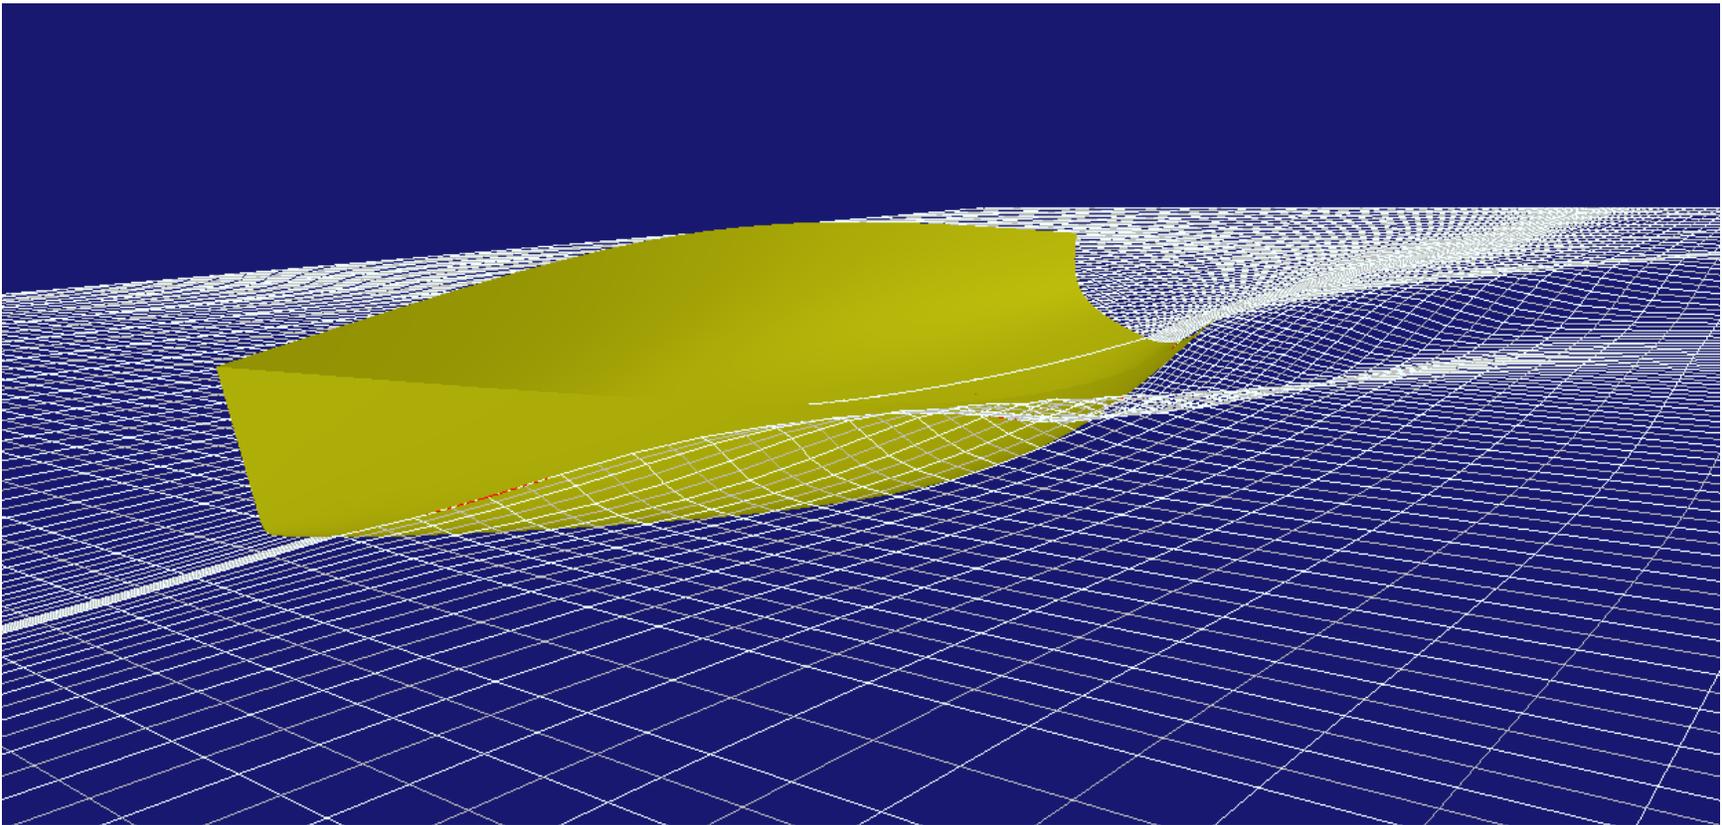

# Towing Tank: Hull Hydrodynamics

- Scaled Model Towed down Basin
  - Fixed in Roll, Sway, Yaw and Surge (Speed)
  - Free in Pitch, Heave
- Measure Lift & Drag Forces, Roll & Yaw Moments, Heave & Pitch Deflections

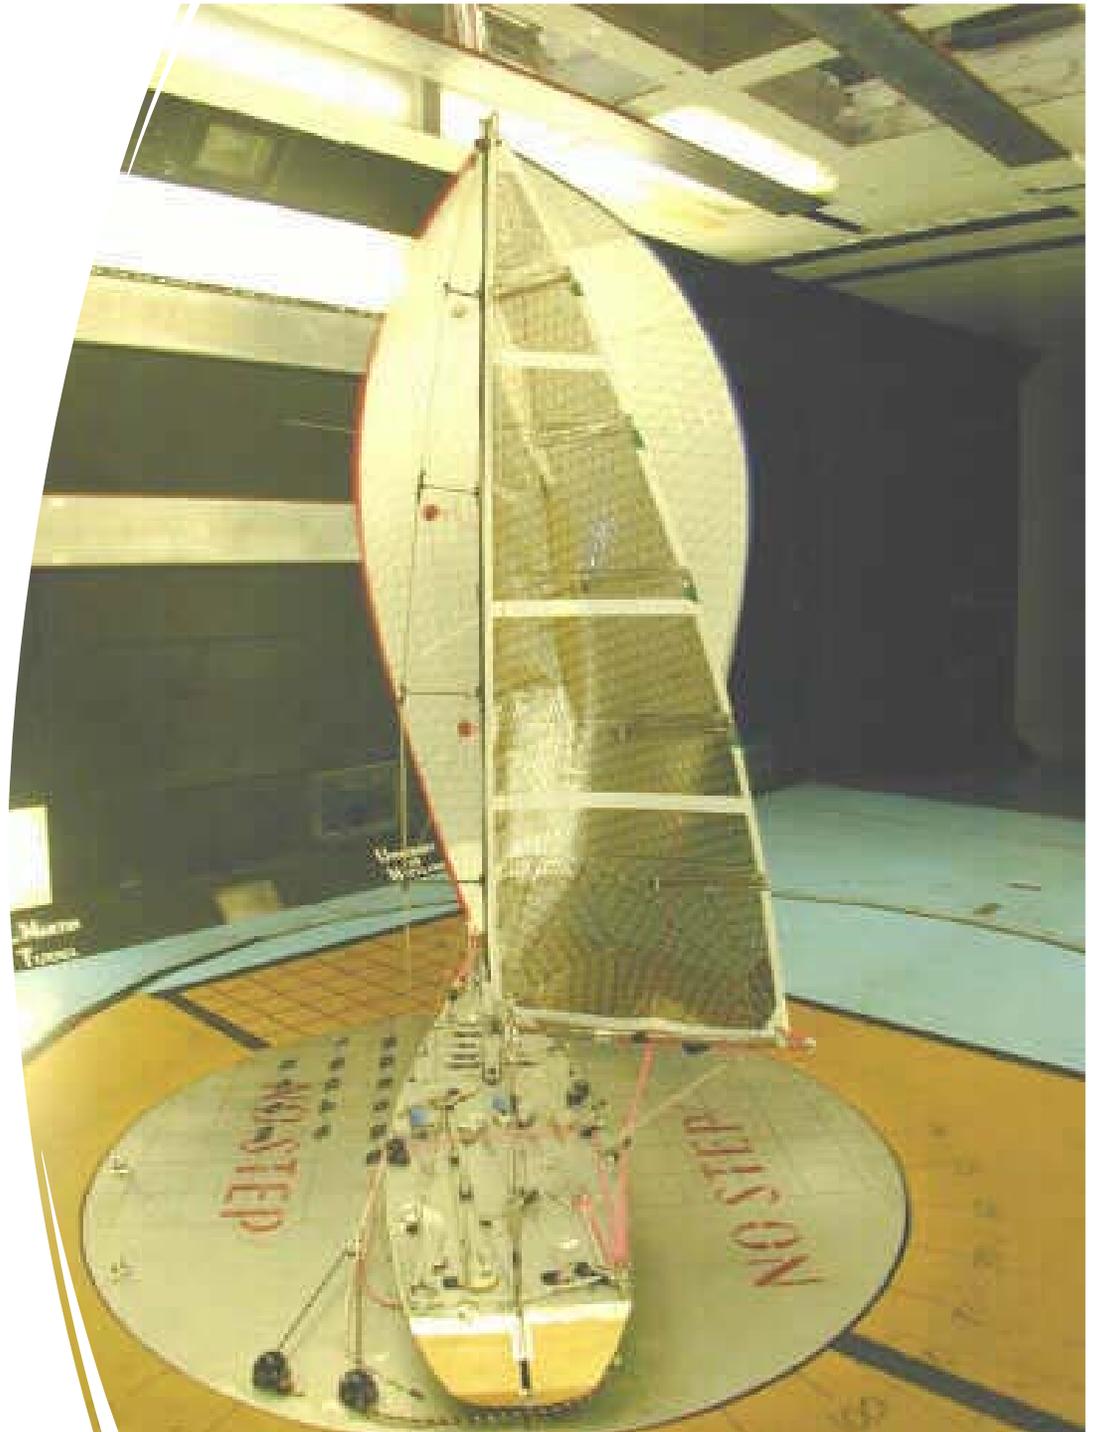

# CFD: Hull Hydrodynamics

- Panel Codes: FlowLogic (David Egan)
- Viscous (RANS) Codes

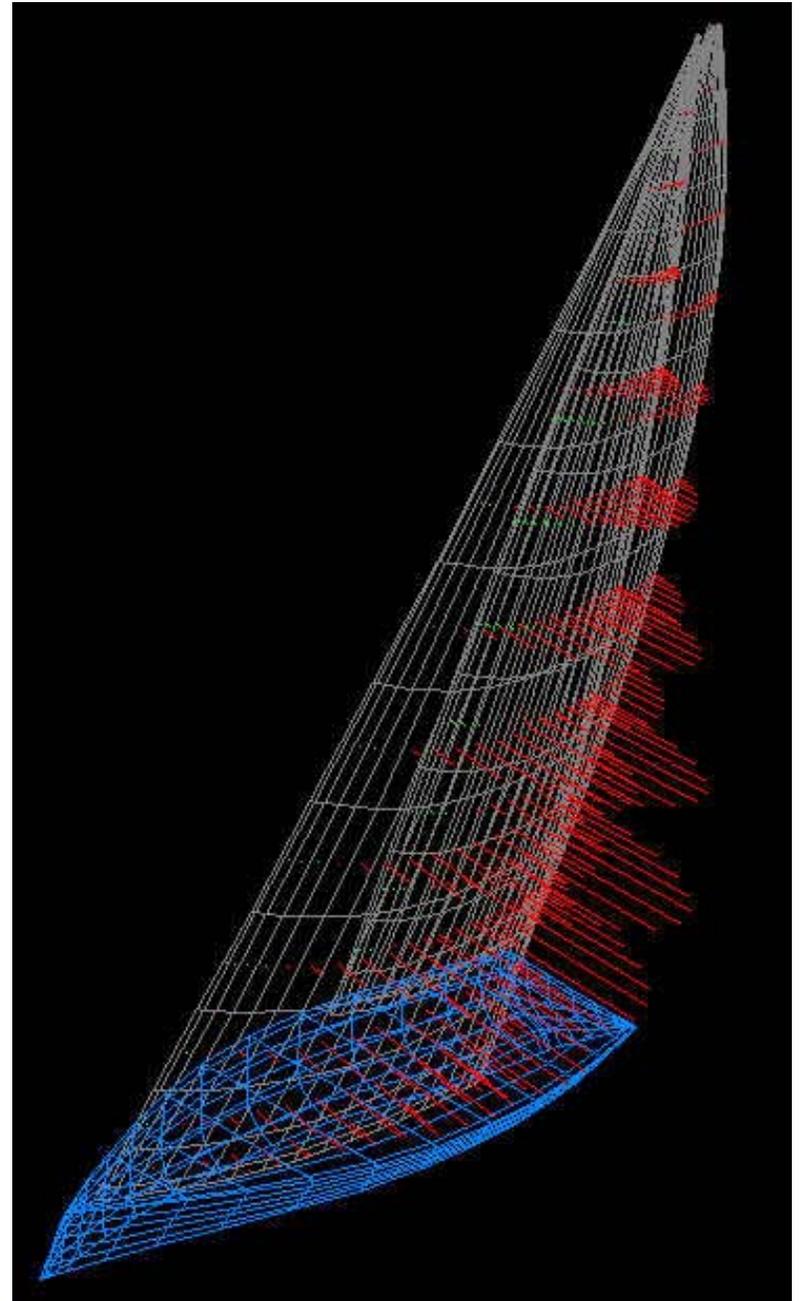

# Wind Tunnel: Sail Aerodynamics

- Scaled Model of Rig with Hull Topsides
- Boat Stationary, Air Cycled Through Tunnel
- Rotate Boat for a Range of Apparent Wing Angles
- Measure Total Forces and Moments for Entire Rig and Hull: Combine Various Sails
- Trim Sails to Get Optimal Performance

# CFD: Sail Aerodynamics

- Vortex Lattice (S2KV)
- Lifting Line
- Lifting Surface Programs
- RANS

# US Sailing: getting rated in ORR/ORC

- Contact Offshore Office (Jim, Chris, Sydney)
- Boat Measurements:
  - **Geometry of Hull/Keel/Rudder** (old: pre-existing, new: designer files/hull scans)
  - **Rig, Sails, Props**
  - In-water measurements: **Freeboard, Inclination**
  - (**Sister ship data** for geometry, disp., stability)
- We will find a measurer in your area
- We process your ORCi, ORC Club and ORR certificates

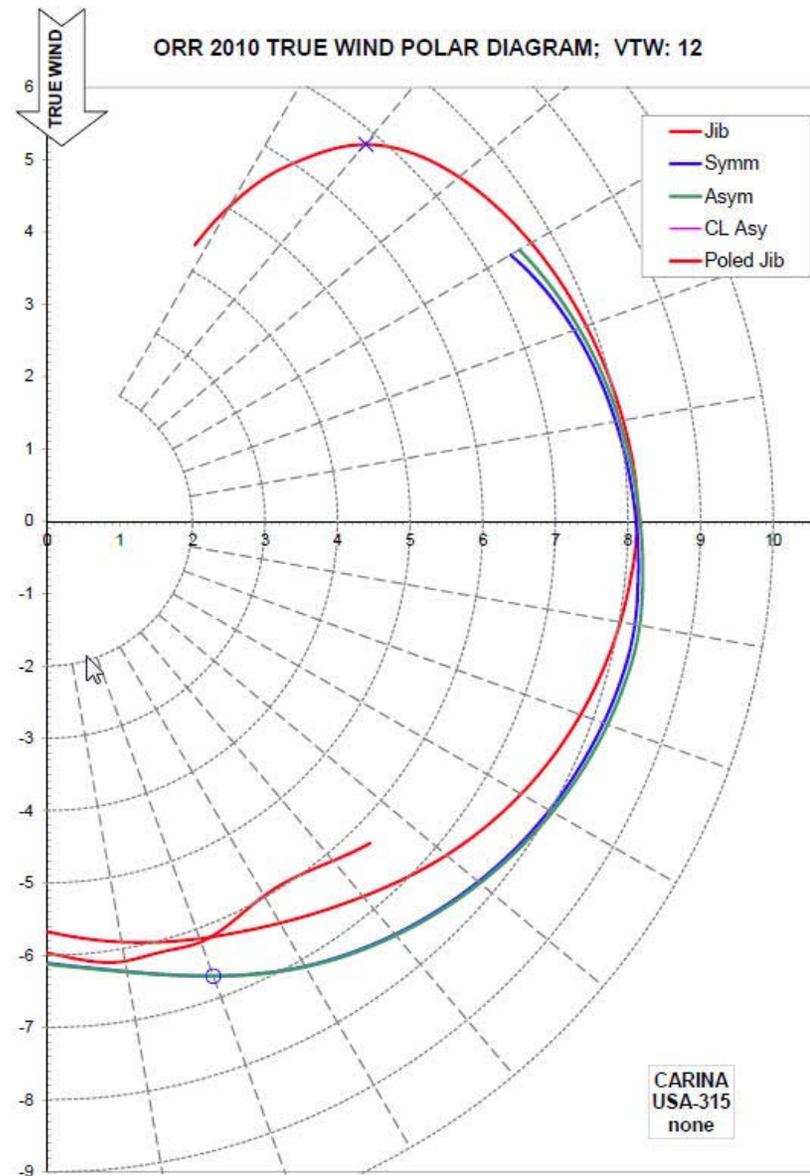

# VPP Output

## Polar Curves for 1 Wind

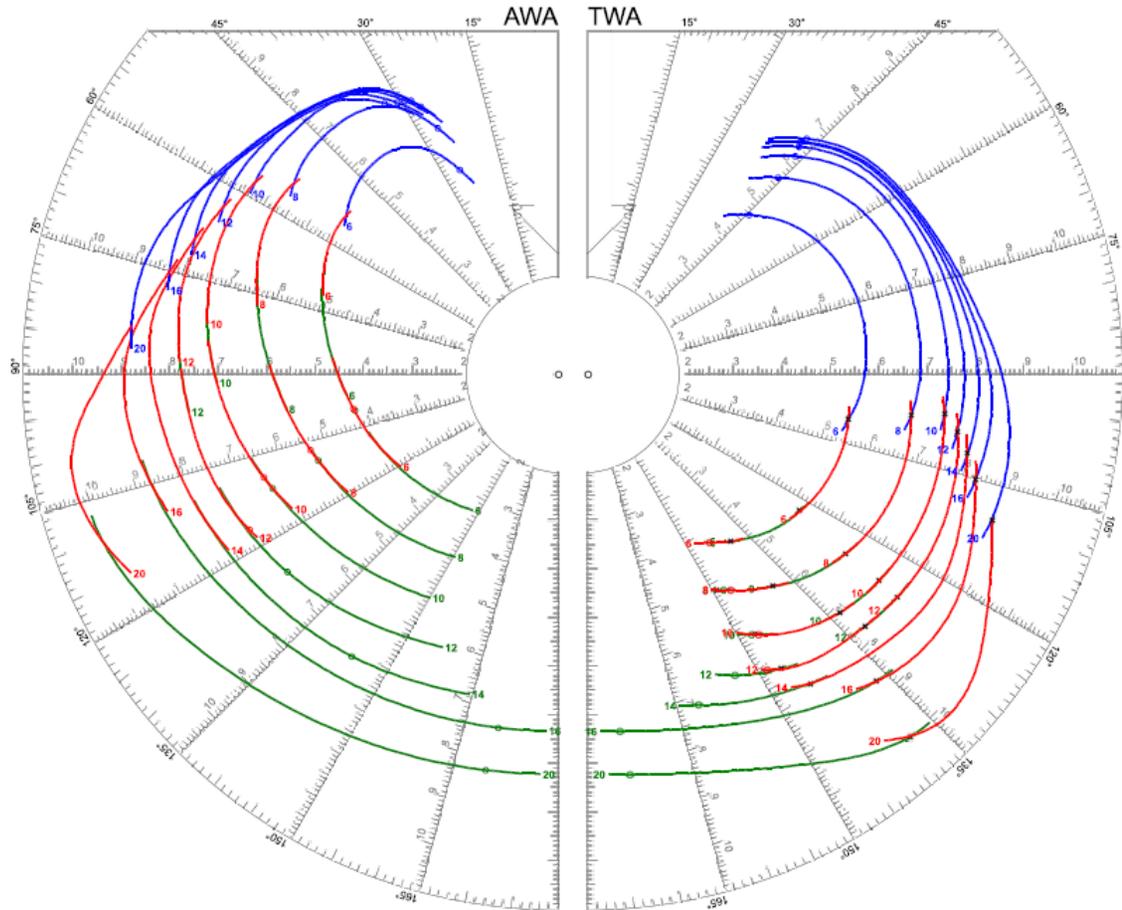

Red: Main+Genoa/Jib

Blue: Main+Symmetric

Green: Main+Asymmetric

# ORC Speed Guide

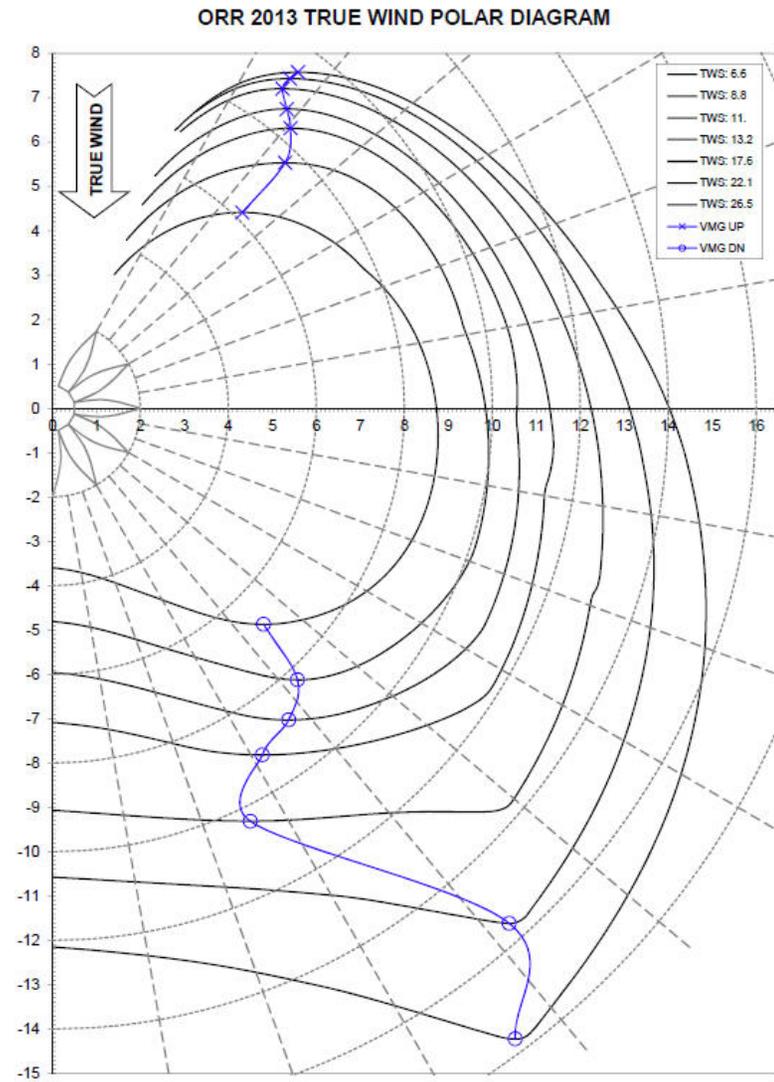

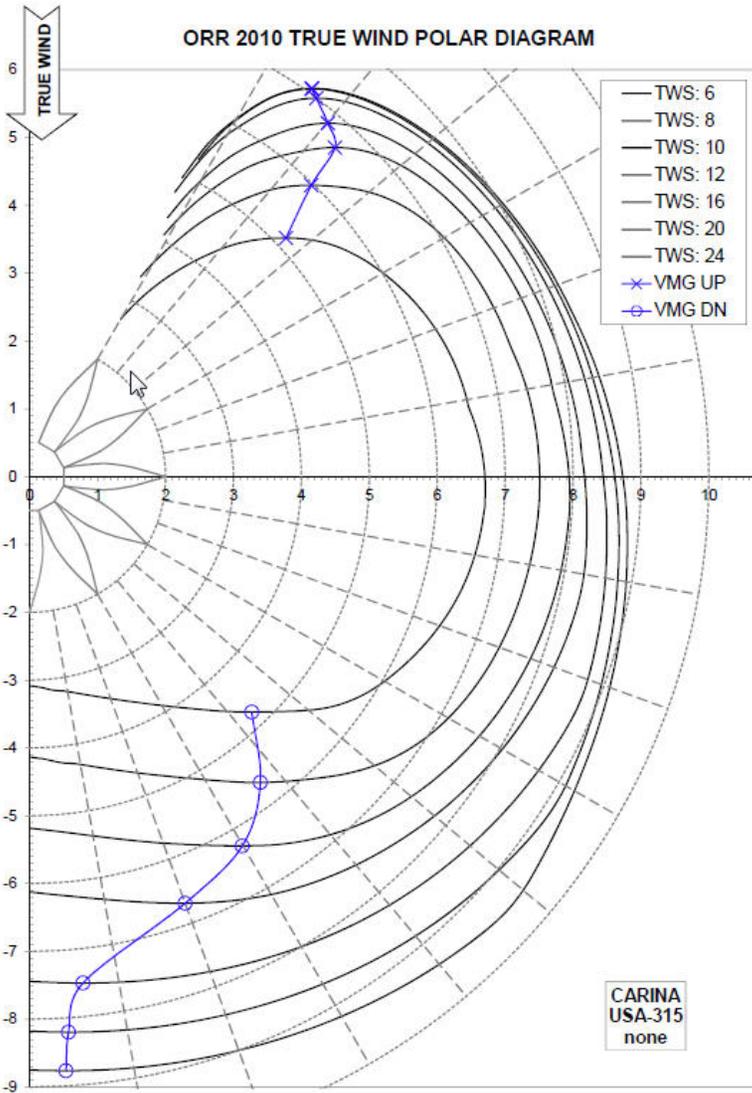

Name **WINDHOVER**  
 Sail # **USA 5201**  
 Class **Swede 41**  
 Designer **Knut Reimer**  
 Builder **Fisksatra**  
 Ref. # [04560026BA](#)

This page contains the polar curves for all wind speeds. The curves are trimmed to highlight the intersection points between different sails. The legend describes the type of sails, also mentioning the sail area when applicable.

TWS: 6,8,10,12,14,16,20

- Headsail, 37,95 m<sup>2</sup> (id = Genoa)
- Symmetric, 73,76 m<sup>2</sup> (id = S2)
- Asymmetric on Centerline, 72,25 m<sup>2</sup> (id = A-sail)

# VPP Output: Tables of Speeds

TABLE OF BOAT SPEED POLARS (knots) (at True Wind Angles)							
Wind Speed (knots)	6 kts	8 kts	10 kts	12 kts	16 kts	20 kts	24 kts
Opt Beat Angle (deg)	46.8 d	43.9 d	43.5 d	41.0 d	38.1 d	37.1 d	37.1 d
